

## Next Generation Alarm Notification

### Come join us for a free, hands-on, half-day workshop of WIN-911

WIN-911 uses configuration logic to filter, route, and escalate HMI/SCADA alarms and events to designated recipients through multiple notification methods. WIN-911 supports single and bi-directional communication for alarms, acknowledgements, informational requests, and reports.

**Support of both GE HMI/SCADA Products** – WIN-911 natively integrates with both iFIX AND CIMPLICITY.

**Notification Options** – WIN-911 provides single or bi-directional communication, acknowledgements, and customized formats via smartphone apps, SMS text messaging, email, voice calls, and reporting.

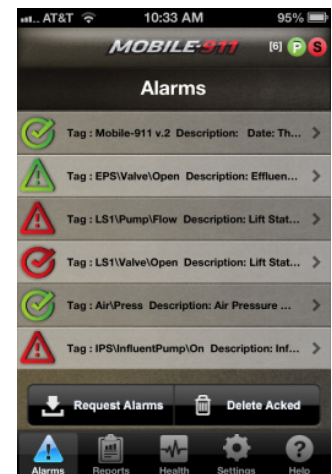

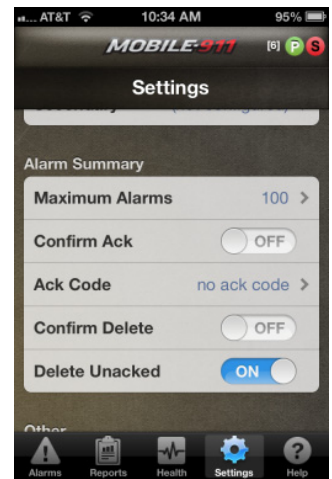

**Notification Escalation Engine** – WIN-911 comes with configurable notification workflows to best meet your operational needs. From a simple callout list to complex escalation logic, WIN-911's patented, script free, drag and drop user interface makes configuration easy and intuitive.

#### When & Where – 8am to 1pm:

- April 12<sup>th</sup> @ TMMI Tempe office.
- April 17<sup>th</sup> @ TMMI Salt Lake City office.
